

Summary

Author: Igor V. Sturit

Theme: IMPROVING THE MECHANISM OF MANAGEMENT OF INFORMATION AND ANALYTICAL ACTIVITY IN THE GOVERNMENT AUTHORITIES OF THE SUBJECT OF THE RUSSIAN FEDERATION (on materials of Krasnodar Region)

Relevance of the research topic: The development of modern society, the high social activity of the population, the heterogeneity of economic processes, the expansion of information flows and the emergence of huge amounts of information are factors that complicate the decision-making process. On the other hand, there are increasing demands on regional government bodies in the qualitative aspects of decision-making that stimulate the economic, political and social development of the region. It also acquires a special role the efficiency of management decisions, which is achieved on the basis of reliance on modern information, analytical and communication technologies that optimize the management process. The described conditions for the implementation of management activities and requirements for decision-making at the regional level indicate a growing tendency to strengthen the role of information and analytical activities based on modern information and intellectual techniques that ensure the development and implementation of solutions to achieve specific management goals.

The object of the research is the totality of social relations that are formed in the process of managing information and analytical activities in government bodies of a constituent entity of the Russian Federation.

The subject of the research is the mechanism for managing information and analytical activities in government bodies of a constituent entity of the Russian Federation.

The purpose of the study is to provide a theoretical and methodological analysis of the prerequisites for the implementation of information and analytical activities in government bodies of a constituent entity of the Russian Federation and the rationale for improving the mechanism for managing information and analytical activities in regional government bodies.

To achieve this goal a number of tasks were formulated:

- explore the main methodological systems of information and analytical activities;
- to consider and identify the essence of the information and analytical activities of public authorities in the context of the implementation of the state information policy;
- to identify the features of the implementation of information and analytical activities at different levels of government in the government bodies of a constituent entity of the Russian Federation;
- explore the role of information and analytical activities in government bodies of the constituent entities of the Russian Federation in the process of forming a single information space of the region;
- to summarize the regulatory framework for the implementation of information and analytical activities in government bodies of the constituent entities of the Russian Federation;
- to consider the organization of information and analytical work in government bodies of the constituent entities of the Russian Federation;
- to study the specifics of the organization of information and analytical activities in the field of regional management of the Krasnodar Territory;
- to analyze the information and analytical activities of state authorities of Krasnodar Region;
- to formulate and justify mechanisms for optimizing information and analytical activities and to make proposals for improving its implementation in the state authorities of the Krasnodar Territory.

The hypothesis of the study is the improvement of information and analytical activities in the state authorities of the constituent entities of the Russian Federation involves the complex implementation of the functions of collecting, analyzing and storing information by departments that carry out information and analytical activities in regional authorities, which provides support for making effective management decisions.

Research methods. In the work in the analysis of theoretical material, scientific sources on the subject of research used general scientific research methods, such as logical analysis and synthesis. In the analysis of empirical material used private research methods: the method of continuous sampling, content analysis.

The empirical foundations of the study are statistical data in the area under study, regulatory documents governing the process of public administration at the regional level, materials reflecting the activities of information and analytical structures in government bodies of the Krasnodar Region.

The following provisions are to be defended:

1. The management of information and analytical activities in government bodies of a constituent entity of the Russian Federation is determined by the idea of information and analytical activities as a system-forming condition for the management process based on fundamental methodological grounds and ensuring the development of optimal management decisions.
2. The management of information and analytical activities in government bodies of a constituent entity of the Russian Federation involves the differentiation of mechanisms for implementing information and analytical activities at the strategic, tactical and operational levels of management decision-making at the regional level.
3. The need to improve information and analytical activities is determined by the following main trends in regional development: the implementation of information policy at the regional level and the formation of a single information space in the region.
4. Mechanisms for improving the management of information and analytical activities of regional government bodies are based on the integrated implementation of measures in accordance with the functions of information and analytical activities: the function of information gathering, analytical and technical functions.

The scientific novelty of the research lies in the theoretical generalization of various approaches to the study of the problem of managing information and analytical activities in government bodies of a constituent entity of the Russian Federation. The results of the study, with signs of scientific novelty, include:

- a systematic approach to the study of information and analytical activities in government bodies of a constituent entity of the Russian Federation allowed to formulate and justify the need to single out the functions of information and analytical activities as an integrated requirement for managing information and analytical activities at the regional level;
- consideration of the Russian experience in implementing information and analytical activities in government bodies of the constituent entities of the Russian Federation allowed to identify the main factors causing the need to improve the management of information and analytical activities at the regional level, which include the implementation of information policy at the regional level and the formation of a single information space in the region;
- after analyzing the implementation of information and analytical activities by the executive authorities of the Krasnodar Territory, the author considers prospects for improving the management of information and analytical activities and formulates proposals based on the integrated implementation of measures in accordance with the functions of information and analytical activities: the function of information gathering, analytical and technical functions.

Theoretical and practical significance of the research.

The theoretical significance of the study is due to the relevance of the system analysis of the theoretical and practical aspects of improving the management of information and analytical activities in government bodies of a constituent entity of the Russian Federation. The findings obtained as a result of the research presented in this work allow us to deepen the existing scientific understanding of the principles and methodology of organizing information and analytical activities and its role in the implementation of management functions by regional authorities.

The practical significance of the study lies in the fact that the results obtained can be used in the process of developing practical measures to improve the management of information and analytical activities in government bodies of the constituent entities of the Russian Federation. The materials of the master's thesis can also be useful when reading general and special courses on control theory.
